

# PROGRAMME SPECIFICATION

Name, title and level of final qualification(s)	BA Psychological Studies
	(Level 6)
Name and title of any exit qualification(s)	Certificate in Higher Education (Psychology) Diploma of Higher Education (Psychology)
Is the programme offered with a Foundation Year?	No
Awarding Body	University of London
Teaching Institution(s)	Birkbeck, University of London
Home Department/other teaching departments	Psychological Sciences Birkbeck Business School Education Directorate
Location of delivery	Central London
Language of delivery and assessment	English
Mode of study, length of study and normal start month	Full-time (3 years) Part-time (4 years) September
Professional, statutory, or regulatory body	Not applicable
QAA subject benchmark group(s) Higher Education Credit Framework for England	Psychology
UCAS code	C803
Birkbeck Course Code	UUBAPSST_C (3 years full-time) UBAPSYST_C (4 years part-time)
HECoS Code	100497
Start date of programme	October 2025
Date of programme approval	Summer 2024
Date of last programme amendment approval	N/A
Valid for academic year and cohorts	2025-26
Programme Director	Ana da Cunha Lewin
Date of last revision to document	01/07/2024

# **Admissions requirements**

We welcome applicants without traditional entry qualifications as we base decisions on our own assessment of qualifications, knowledge, and previous work experience. However, to fully engage with the BA Psychological Studies students need to demonstrate an appropriate level of preparedness:

For the part-time programme, we would normally expect applicants to hold a minimum of GCSE Grade 4 (previously Grade C) or Functional Skills Level 2 in Mathematics and English. Applicants who do not meet these qualifications will have the chance to take our in-house admissions test. We may waive formal entry requirements based on judgement of academic potential.

For the full-time programme, applicants should have 96 UCAS points. The UCAS tariff score is applicable to applicants if they have recently studied a qualification that has a UCAS tariff equivalence. UCAS provides a tariff calculator for you to work out what your qualification is worth within the UCAS tariff.

#### Course aims

The Bachelor of Arts (BA) in Psychological Studies is an undergraduate degree aimed at preparing students for careers related to psychology, but which do not need to adhere to the British Psychological Society (BPS) standards for practicing psychologists. This makes the degree innovative, flexible, contemporary, and tailored to your interests!

The BA Psychological Studies explores various aspects of human behaviour, examining how we learn, remember, coordinate actions, and interact with others. You will gain insights into how psychology enhances our understanding of the mind and the connection between the brain and behaviour.

The BA Psychological Studies provides you with a thorough grounding in academic psychology at the same time as offering you the opportunity to focus your studies on any of the optional modules they find of interest or relevant to your future career plans. These include specialist modules on developmental psychology, individual differences, cognitive psychology, neuroscience, social psychology as well as a wide range of applied psychology modules. In your final year, you will collaborate closely with expert academic staff to develop an independent theoretical dissertation on a psychology-related topic of particular interest or relevance to you.

Particularly aimed at psychology students who do not wish to pursue careers as professional psychologists, the BA in Psychological Studies opens the door to many opportunities beyond the traditional path. This degree equips graduates with a skill set applicable to numerous fields. For instance, graduates might enter careers in human resources, marketing, social services, education, user experience and health care, where an understanding of human behaviour is key.

The BA Psychological Studies will also support you to acquire skills that are highly valued by a wide range of employers. For example:

- A sound knowledge and understanding of all the core areas of psychology plus the ability
  focus your advanced studies on those topics that are most relevant to your interests from a
  wide range of options giving you the ability to create a bespoke degree tailored to your
  specific needs.
- An ability to engage critically with psychological literature, applying multiple perspectives to psychological issues and integrate findings across multiple perspectives.
- Your theoretical dissertation will offer you the opportunity to explore a topic at length and in

- depth. This will enable you to develop your ability to conduct a literature review and showcase your critical writing abilities, under the supervision of an academic in the department.
- When you graduate, you will leave equipped you with a range of transferable skills, for example: numeracy, high levels of literacy and problem-solving skills, the ability to make reasoned arguments, the ability to work independently and in teams, and the ability to take responsibility for and to manage your own learning.

By offering a comprehensive understanding of psychological concepts without the stringent requirements for future professional practice in psychology, this degree allows students to explore and excel in a wide range of fields and applications. Additionally, the programme will help you to develop critical thinking, analytical skills, and emotional intelligence, making you well-suited for leadership and management positions across various settings.

The BA Psychological Sciences may be completed on a full-time (3 years, 120 credits per year) or part-time (4 years, 90 credits per year) basis. Students who do not meet the entry criteria to join the full-time (3 year) undergraduate programme may be offered a place on part-time route to allow them a longer period within which to develop their skills and maximise their potential.

Students wishing to train as professional psychologists on graduation should take the BSc (Hons) Psychology. However, students starting their studies on this programme can transfer to the BSc Psychology at the end of their first year, subject to attaining a minimum of 55% in their first year modules and selecting and satisfactorily completing Research Methods in Practice in Year 1.

6	BUOB011H6	Careers and Counselling at Work	15	Option	T2
6	PSYC034H6	Language	15	Option	T2
6	SCPS238H6	Neurodiversity	15	Option	T2
6	SCPS227H6	Neuropsychology	15	Option	T2
6	SCPS001H6	Sexuality, Psychology and Sex Work	15	Option	T2

<sup>\*</sup>Option Pre-requisites: Two option modules on this programme have prerequisites:

Research Methods 1- to be eligible to study this module, students need to have satisfactorily completed Understanding Research Methods for Psychology (SCPS168H4) **and** Research Methods in Practice (SCPS169H4).

Clinical and Counselling Psychology – to be eligible to study this module, students need to have satisfactorily completed Individual Differences (SCPS160H5).

Core: Module must be taken and passed by student

Compulsory: Module must be taken but can be considered for compensated credit (see

CAS regulations paragraph 24)

Option: Student can choose to take this module

#### How you will learn

Your learning and teaching are organised to help you meet the learning outcomes for the programme. As a student, we expect you to be an active learner and to take responsibility for your learning, engaging with all the material and sessions arranged for you.

The programme is divided into modules. You will find information on the virtual learning site (Moodle, see Academic Support below) about each of your modules, what to expect, the work you need to prepare, links to reading lists, information about how and when you will be assessed.

Teaching on this programme is a combination of lectures and seminars. Lectures are designed to provide you with an outline or overview of the topic, to engage you with the material and direct you to other resources. They are a springboard for your own learning. Seminars are group sessions where you will be asked to contribute to discussion or group work around the topic, with material set in advance for which you need to prepare.

At level 4, the learning and teaching methods are student-centred with a creative approach to linking critical analytic thinking and psychology. Methods will include group work, case studies, discussions, student presentations and feedback alongside traditional lectures. You will be expected to engage actively in the process of learning, participating in discussions and presentations, group, and project work, where appropriate.

At level 5, students use the skills they have developed at Level 4 to engage with their selected topics more deeply, participating in discussions and participating in group and project work, where appropriate.

At level 6, the programme further includes seminars, small group work appropriate to the aims and objectives of individual modules. You will also complete a theoretical dissertation on a suitable agreed topic area.

# How we will assess you

The programme will use a variety of assessment methods. Assessment is used to enhance your learning rather than simply to test it. For most of the modules associated with this course, your assessment will be through the following types of assessment: Short written exercises, essays which will develop in length and expected complexity as you progress through your studies, quizzes and multiple-choice questionnaires, practical assessments (of your work in a lab, such as a lab report), case studies, presentations, in-class timed tasks, reflective reviews and a theoretical dissertation.

#### Learning outcomes (what you can expect to achieve)

'Learning outcomes' indicate what you should be able to know or do at the end of your course. Providing them helps you to understand what your teachers will expect and also the learning requirements upon which you will be assessed.

At the end of this course, you should be able to

# **Subject Specific:**

- 1. Demonstrate an understanding of all core areas of psychology, including cognitive, developmental, social psychology, individual differences, neuroscience and historical aspects.
- 2. Demonstrate a deeper knowledge of selected core areas of psychology, depending on options selected.
- 3. Apply multiple perspectives to psychological issues.
- 4. Integrate ideas and findings across multiple perspectives.
- 5. Demonstrate an understanding of how empirical studies are planned, conducted, communicated, and critiqued when a range of experimental, quasi-experimental and qualitative methodologies are employed.
- 6. Demonstrate a basic understanding of data and data analysis.
- 7. Use and critique primary sources and demonstrate an understanding of their application in practice.
- 8. Use psychology databases.
- 9. Demonstrate an ability to use and understand statistical software packages for the analysis of data.

#### Intellectual:

- 10. Demonstrate independent and critical thought and the capacity to critically analyse and evaluate ideas and findings.
- 11. Demonstrate numeracy and high levels of literacy.
- 12. Demonstrate problem analysis and problem-solving skills.

#### Practical:

- 13. Communicate ideas and findings by written oral and visual means.
- 14. Demonstrate high levels of computer literacy, including word processing and other software packages as well as a capacity to use specialised statistical software packages at a basic level.
- 15. Demonstrate the skills required to frame a research question; search relevant bodies of literature; manage search results; synthesise the research literature; and write an assessment of the literature that identifies: what is known about the area of study; those questions the body of research does not answer; and further research questions important for that field of study.
- 16. Plan and conduct a review of relevant literature.

# Personal and Social:

- 17. Reflect on and to take responsibility for own learning.
- 18. Undertake self-directed study and project management.
- 19. Work effectively in teams.
- 20. Demonstrate the skills required to pursue post-graduate study and / or training.

# Careers and further study

BA Psychology graduates will complete their studies with a set of valuable attributes that will support their employability and their preparedness to continue to postgraduate study, for example:

- Computer literacy, including the use of word processing and literature databases.
- The ability to critically analyse and evaluate material.
- · Effective oral and written communication skills.
- Independent and critical thinking.
- Problem analysis and problem-solving skills.
- Research skills.
- The ability to take responsibility for and to manage own learning and development.

The ability to work independently and as part of a team.

Psychology graduates are highly employable and can be found across a wide range of sectors and roles, including:

- human health and social work,
- education,
- public administration,
- administration and support service activities,
- the leisure and communications industries,
- the arts, entertainment, and other industries.

This programme has been designed to offer students a degree that maximises their employability. By offering all students a rigorous introduction to all areas of psychology at Level 4 and then enabling them to build on this according to their needs and interests, students can create a degree that is specific to their future career plans.

While Birkbeck offers a range of careers support to its students (<u>you can find out more on the careers pages of our website</u>), students will also benefit from school level events and guidance in choosing of their modules at Levels 5 and 6.

# Academic regulations and course management

Birkbeck's academic regulations are contained in its <u>Common Award Scheme Regulations</u> and Policies published by year of application on the Birkbeck website.

You will have access to a course handbook on Moodle and this will outline how your course is managed, including who to contact if you have any questions about your module or course.

#### Support for your study

Your learning at Birkbeck is supported by your teaching team and other resources and people in the College there to help you with your study. In your first year, you will be given structured support to develop the skills that you need to study effectively. The School of Psychological Sciences also has dedicated learning support staff who are highly experienced in supporting students' learning and who will be able to support you across every year of your studies.

Birkbeck also uses a virtual learning environment called Moodle and each course has a dedicated Moodle page and there are further Moodle sites for each of your modules. This will include your course handbook.

Birkbeck will introduce you to the Library and IT support, how to access materials online, including using Moodle, and provide you with an orientation which includes an online Moodle module to guide you through all the support available. You will also be allocated a personal tutor, have access to a Senior Tutor and will be provided with information about further learning support offered by the College. Please also check our website for more information about student support services. This covers the whole of your time as a student with us including learning support and support for your wellbeing.

# **Quality and standards at Birkbeck**

Birkbeck's courses are subject to our quality assurance procedures. This means that new courses must follow our design principles and meet the requirements of our academic regulations. Each new course or module is subject to a course approval process where the

proposal is scrutinised by subject specialists, quality professionals and external representatives to ensure that it will offer an excellent student experience and meet the expectation of regulatory and other professional bodies.

You will be invited to participate in an online survey for each module you take. We take these surveys seriously and they are considered by the course team to develop both modules and the overall courses. Please take the time to complete any surveys you are sent as a student.

We conduct an annual process of reviewing our portfolio of courses which analyses student achievement, equality data and includes an action plan for each department to identify ongoing enhancements to our education, including changes made as a result of student feedback.

Our periodic review process is a regular check (usually every four years) on the courses by department with a specialist team including students.

Each course will have an external examiner associated with it who produces an annual report and any recommendations. Students can read the most recent external examiner reports on the course Moodle pages. Our courses are all subject to Birkbeck Baseline Standards for our Moodle module information. This supports the accessibility of our education including expectations of what information is provided online for students.

The information in this programme specification has been approved by the College's Academic Board and every effort has been made to ensure the accuracy of the information it contains.

Programme specifications are reviewed periodically. If any changes are made to courses, including core and/or compulsory modules, the relevant department is required to provide a revised programme specification. Students will be notified of any changes via Moodle.

Further information about specifications and an archive of programme specifications for the College's courses is <u>available online</u>.
